Publishing open data

There are different options to publish the data of your research project in open access. In order of priority:

- **Thematic repositories**: publish the data in a thematic repository within your field. Check whether there is a suitable thematic repository by consulting some of the main repository finders:
  - re3data.org: Registry of Research Data Repositories
  - AIRsharing.org
  - DataCite Commons > Repository Finder
- **Institutional repository**: publish the data in the consortium repository of the universities and research centres of Catalonia CORA.RDR (Repository of Research Data).
  - Check out Publishing data at UPF
- **Other multidisciplinary repositories**:
  - Zenodo
  - Eudat
  - Figshare
  - Dryad
  - Dataverse
  - Mendeley Data

Consult the table comparing the main characteristics of the repositories in the Recomanacions per seleccionar un repositori per al dipòsit de dades de recerca created by CSUC.

> ❗ If you do not wish to publish your data in the CORA.RDR (Research Data Repository), please contact us at repositori.dades@upf.edu in order to link the data with the related publications.
